

SARTORIUS PMA.QUALITY DIGITAL SCALE

The PMA.Quality is truly a painter's best friend in the mix room.

Rugged, reliable, and full-featured weighing

The Quality introduces new standards in operation, features, and applications. Whether used as a stand-alone scale or connected to PC, the PMA.Quality has the winning features that only a genuine Sartorius paint weighing scale can offer.

With an enhanced 14-segment 'tilt able' backlit display it provides outstanding viewing capabilities especially in low-light working conditions. The Quality also features a rolling text function for reading longer formulas and messages. A newly designed keypad overlay with familiar icons from computer technology.

Over-pouring mistakes can happen to the best painters but it's never a concern with the PMA.Quality thanks to the over-pour recalculation software for correcting mistakes with the greatest of ease. Operators can also prepare small batches of paint by using the handy fractional weighing feature.

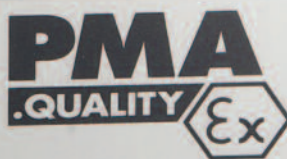

SARTORIUS PMA.QUALITY DIGITAL SCALE
