

Ionizer PRO - Static Gun

Ionizer PRO is an advanced cordless gun system that forms positive and negative ions to neutralize static electricity present on surfaces and help eliminate dirt and dust particles on panels ready to be painted. Several common tasks in a body shop can cause static build-up, such as sanding, blowing, masking or cleaning. However, with **Ionizer PRO**, you will improve the process of applying metallic, pearly and pearlescent paint, both water or solvent-based, as well as increase the profitability of your body shop with reductions in time and material usage to achieve perfect end results. You will notice a marked difference in the time and quality of your production!

Ionizer PRO comes with a system composed of an ion generator and a valve which leads and directs compressed air the objective to be neutralized. Ions and air combination cause existing particles to be expelled and prevents them to be adhered again to any surface due to its charge lost. Aluminum and stainless steel air lines are the most efficient ones. We do recommend filtering the air with 2-body models, water + oil filtering code, or 3-body models, water + oil + active carbon code. These type of models are the most efficient to use either with the Ionizer PRO or for painting tasks.

Electrical Specifications

Input voltage	5VDC
Max charging current	550mA
Output voltage	+/-6500V Tol 10%
Max output voltage	<=20μA
Max working power	1.5W
Laser pointer	650 nm <1mW Class II
Internal battery	LIPO 1800mAh 3.7V

Charger:

Input: 110/230V 50/60Hz
Output: 5Vdc 750mA
